

**SNAPFULFIL**<sup>TM</sup>  
Warehouse Management System

**Putting you**  
in the driving seat

## **Easily manage multiple clients** with a warehouse management system (WMS) tailored for 3PLs.

Managing warehouses is your business and you know what good looks like. SnapFulfil offers everything you expect from a best-of-breed WMS, for a fraction of the cost and in a fraction of the time usually associated with a big box solution.

SnapFulfil's powerful rules-based configuration engine gives all users access to its full functionality alongside the flexibility to pivot in line with evolving customer demands by switching key features on and off.

## **Multi-owner features**

We understand that all your customers are different. SnapFulfil's multi-owner features allow you to provide tailored warehouse management solutions under one roof, while ensuring that your billing is both accurate and transparent. Your clients can also benefit from their own unique access portal to manage product information, orders and more.

## **3PL functionality**

As a 3PL provider, you have to adapt quickly and cost-effectively to the demands of your clients and you need a WMS provider who can do the same. SnapFulfil is packed full of features specifically designed for 3PL clients.

## Visibility and control

SnapFulfil offers the ultimate in visibility and control for 3PLs and their customers through two 3PL specific features – enhanced billing and the customer Biz Portal

Enhanced billing - Offers detail, accuracy and clarity of billing for 3PLs and was developed in conjunction with SnapFulfil's 3PL partners. It allows 3PLs to set credit limits so that they are only billed when the set amount is reached or allows them to set other billing structures, such as tiered rates depending on the number of SKUs.

Customer biz portal – A customer specific portal that allows 3PLs to grant access to their customers to enable them to manage shipments and have visibility of the warehouse without seeing the 3PL's other customers' information. Customers can create products, receipts & shipments and have an overview of their stock, including the progress of their receipts and shipments. Furthermore, the advanced biz portal not only allows users to create products, receipts and shipments but also manage their own stock, receipts and shipments where necessary. Examples of this may include changing the status of stock or cancelling a receipt or shipment.

## Powerful tool

SnapFulfil's billing module is a powerful tool that provides the ability to charge your clients for activities performed in the warehouse. Invoices can be generated on a daily, weekly, monthly, quarterly or custom period depending on how you wish to bill your clients. Charges and tariffs dictate what is invoiced and can be generic for all clients or tailored for particular clients. Once generated, an invoice can be checked and amended where necessary before the finalising process which generates a printable invoice document and, if required, can be interfaced back to a host system via CSV or API.

# Storage

SnapFulfil allows users to charge their clients for storage and picking in a number of ways:

- Cubic volume storage – charge by product volume (cm<sup>3</sup>) for storage in Stock Tracking Unit (STU) and non-STU controlled slots.
- Product surcharging - A particularly useful function for over-sized product charges and uses the stock storage (STT) type.
- Storage and occupancy – Charge for occupancy of an entire section, bay or zone even if just a single location is occupied by the owner. Users can also charge by Stock Keeping Unit (SKU) per slot, which is particularly useful for clothing and small products.

# Shipping

The ability to pass on a wide range of shipping and carrier charges to the client is crucial for modern day 3PLs. SnapFulfil's extensive functionality in this area includes:

- Tiered levels – Set tiered charging rates for pre-determined quantities shipped and invoice accordingly. Charge can be per shipment or across all shipments.
- Shipping charges – carrier freight charges can be passed onto the client
- Shipping consumables - Charge by packaging type consumed on shipments.
- Alternate UOM – Generate an invoice where a product is either shipped in an alternate Unit of Measurement (UOM) or where the product has an alternate UOM but is still shipped in the main UOM.
- Priority shipping – Generate an invoice for a priority shipment or receipt where additional labour has been used to rush through the processing.

# Document generation

Another widely used feature on the SnapFulfil 3PL module is the ability to charge against document generation whether that be Dnote, Manifest, Bill of Lading (BOL) or Goods Receipt Note (GRN).

## Value added services

Value added and generic activities, such as recurring support charges, can also be recorded - either on an impromptu basis or against shipments and receipts - and charged to the customer.

Other key invoicing features include the ability to store additional shipping details, minimum fee charges, cancel active invoices and create ad hoc invoice lines in advance of a processing run.

**Customer:** Moran Logistics

**Industry:** Multi-Temperature Controlled Warehousing and Distribution

**Location:** Castle Donington HQ in Derbyshire, UK

**Warehouse size:** 100,000 sq.ft

**No. of users:** 100

**Length of implementation:** 3 weeks

**Integration requirements:** Alignment with the company's ERP and TMS systems

## Expansion food for thought from WMS improvements...

### THE CHALLENGE

One of Moran's key customers is a short shelf life product manufacturer supplying the majority share of branded and own label fast moving consumer goods (FMCGs) to the major supermarket chains.

The product is one of the most complex and fast paced of all the FMCG supply chains, with an ultra-tight

12-day window between farm to end of shelf life – and the new WMS that Moran had very recently purchased and started to implement, needed to be much more flexible and configurable and able to factor in the likes of retailer-specific EDI, as well as picking in rotation, re-pack solutions and reverse logistics.

### SOLUTION AND IMPLEMENTATION

A technologically advanced, cloud based company, SnapFulfil, was identified as the preferred solution because of the company's 3PL expertise, plus the renowned agility and configurability the software provides. Moran were able to see the tangible value in the scope of its functionality and operational proficiency.

The large replica database facilitated much greater efficiency in terms of picking performance and reporting, while historic productivity data has proved vital in managing ongoing pandemic labour and resource shortages. Traceability is also greatly improved for what is a health & safety and supply chain security-driven sector – with no tainted product able to slip through the distribution net.

### THE BENEFITS

With multiple picking and packing options now available, production output has quickly and efficiently ramped up four-fold, from an initial 10,000 cases per day to nearer

40,000 within a 13- week period. Impressively within the next 13-weeks this will further increase to between 75-88,000 cases in a 24 hour period.

# Time to rewrite the rules with SnapFulfil

Our agile warehouse management system, with its rules-based configuration engine, lets you adapt your system at speed. It is specifically designed for 3PLs with features such as multi-owner configuration, best-of-breed billing software and a unique customer portal.
